

HOW TO USE THE VAPE PEN

1. To turn pen on or off, press power button 5 times.
2. To cycle through power settings, quickly press the power button 3 times. A red light indicates the pen is at the highest heat setting.
3. Press and hold power button while inhaling.

The vape pens are compatible with both Micro USB and iPhone charging connectors.

Do not get a vape pen wet. Discard if you do get it wet, as this can lead to a dangerous short circuit.

CRYSTALS IN THE CARTRIDGE?

If the vape cartridge gets cold the DMT can crystallize and it will not work properly. You will see the crystals in the solution. If this happens, just put the cartridge in a warm environment for 2-3 hours and the crystals will dissolve.

WARNINGS

- **ONLY USE DMT IN A SAFE ENVIRONMENT** where you are relaxed and with trusted people. **DO NOT USE ALONE.**
- **DO NOT DRIVE OR SWIM** or do anything risky while using DMT. It is highly disorienting!
- **Do not use DMT if you are taking LITHIUM.** Lithium with any psychedelic can cause seizures and heart problems.
- **Do not use DMT if you are taking a SSRI, SNRI, MAOI, RIMA, or any drugs which affect monoamine neurotransmitters.** Injury can occur.
- **Exercise caution combining DMT with any other drugs, including alcohol, stimulants, opiates, cannabis, or other psychedelics.** It does not combine well.
- **5-MeO-DMT can sometimes cause nausea and vomiting. It can also cause temporary catatonia. BE AWARE OF RISK OF CHOKING! Do not use alone.**
- **Keep DMT in a secure place away from children.**

DMT VAPE PEN USER GUIDE

Read carefully before using any DMT products.

DMT is short for *dimethyltryptamine* - an extremely potent psychedelic.

There are two main forms of inhalable DMT, they are called NN-DMT and 5-MeO-DMT. They have similar effects in some ways but are quite different in others. **NN-DMT is considered more pleasant and user-friendly.** We have both form of DMT available in vape pen cartridges.

Effects vary and can include intense visual hallucinations, shifting perspectives, new insights, intense emotions, feelings of euphoria, synesthesia and sensual enhancement. Some people report reduced anxiety and stress after using these substances.

Negative effects can sometimes include dysphoria, non-responsiveness, fear, panic, confusion, loss of body control, dissociation and nausea.

Both forms of DMT are *psychoplastogens* - compounds capable of promoting rapid and sustained neural plasticity and new neuron growth.

Our DMT products are made synthetically and are chemically pure. The carts are made with propylene glycol and vegetable glycerin, ingredients found in most THC and nicotine vape pens. There is high-quality flavouring to mask the unpleasant taste of DMT. There is no Vitamin E added.

HOW TO USE NN-DMT

NN-DMT is the main active ingredient in Ayahuasca. It can be extracted from plants such as *Psychotria viridis* or *Mimosa hostilis*. **When people say “DMT” they usually mean NN-DMT.**

EFFECTS: A strong dose produces intense visual hallucinations, colorful fractal images, feelings of being in another world. Some people report feelings of communication with friendly ethereal beings. *Negative effects can include fear, panic, disorientation, non-responsiveness. Nausea can occur at high doses, but is very rare.*

DURATION: The effects of NN-DMT will come on within 30 seconds of being inhaled, and will be about 10-20 minutes in duration. Mild after-effects may linger for up to 30 minutes.

VAPE CARTRIDGES: The small cartridge contains 300mg NN-DMT in a 0.5ml cartridge. This is about 10 strong doses. The large contains 700mg NN-DMT in a 1ml cartridge, which is about 23 strong doses.

DOSING GUIDE: Generally speaking, 5-10mg is a low threshold dose, 15-25mg is a midrange dose, and 30-40mg is a full psychedelic dose.

USAGE GUIDE: To inhale NN-DMT, set the vape pen to the highest heat setting. The pen will deliver about 0.8mg per second of inhalation.

10 seconds = 8mg = low dose

25 seconds = 20mg = medium dose

40 seconds = 32mg = strong dose

These are approximations. It is always best to start low and go slow.

HOW TO USE 5-MeO-DMT

5-MeO-DMT is most well known for being extracted from the Colorado River toad, *Bufo alvarius*.

EFFECTS: A strong dose is often described as transcendent, with fewer visual effects than NN-DMT. Users often report losing sense of self, with intense feelings of cosmic consciousness. *Negative effects can include fear, panic, disorientation, unresponsiveness, temporary catatonia, nausea.*

People sometimes vomit during a high dose. Be aware of risk of choking. Do not use alone.

DURATION: The effects of 5-MeO-DMT are short but can still last longer than NN-DMT. They will come on within 30 seconds of inhalation, peak within 5-15 minutes, and last around 20-30 minutes. Mild after-effects may linger for up to 1 hour.

VAPE CARTRIDGES: The cartridge contains 150mg 5-MeO-DMT in a 0.5mg cartridge. This is about 15 strong doses.

DOSING GUIDE: Generally speaking, 2-3mg is a low-threshold dose. 4-6mg is a midrange effect, while 8-12mg is a full psychedelic dose.

USAGE GUIDE: To inhale 5MeO-DMT, set the vape pen to the middle heat setting. The pen will deliver about 0.5mg per second of inhalation.

5 seconds = 2.5mg = low dose

10 seconds = 5mg = medium dose

20 seconds = 10mg = strong dose

These are approximations. A higher heat setting will deliver a larger dose per second. It is always best to start low and go slow.
